

**LiteShades™ Sportslight Blackout Control**

Payne-Sparkman's LiteShades™ accessory deploys across any directed light luminaire and quickly shades the light, allowing the effect of darkness while maintaining the lamp at full on or a dimmed level. It's superior design outperforms "louver" and "hood" type products because it does not affect fixture efficiency or access to the lamp. Heat penetrates the High Temperature Shade keeping the luminaire and lamp at only slightly higher than normal operating temperatures. The 800° Black Fiberglass Shade absorbs all of the light while allowing much of the heat to pass through. The LiteShades™ system works in conjunction with round or square luminaires. Combined with Payne-Sparkman's LiteTalk™ Lighting Control System and Full Range HID Dimming System, ultimate control of the lamps and reflectors is made easy.

Special Sizes and Configurations are Available-Contact Factory for Information.
